

HOW TO AVOID SCAMS:

- 1 Create Strong Passwords.**
Strong passwords are the foundation of good internet safety. Most websites have requirements for your password, such as capital letters, numbers, and special symbols (\$?!). Using one of these will make a good password. Using two, or all three, is the best way to create a strong password.
- 2 Beware Created Urgency.**
Phone call scammers will often try to create a sense of urgency. When you're stressed and panicked, you are less likely to think critically about the situation. They want you to be scared, confused and panic so that you will react immediately instead of stopping to verify their claims.
- 3 Legitimate payments do not need to be made in gift cards.**
Demanding payment via gift cards is a dead giveaway of a scam. No real business or agency accepts gift cards for debts, so never purchase them for payment.

Types Of Scams

Phishing Scams

The most common type of scam in this digital age. Phishing scams are easy to spot when you know what to look for. See page 3 for tips to spot them.

Identity Theft

Identity theft is when someone steals your personal information—often through phishing, breaches, or social media—to commit fraud. Protecting your data is essential.

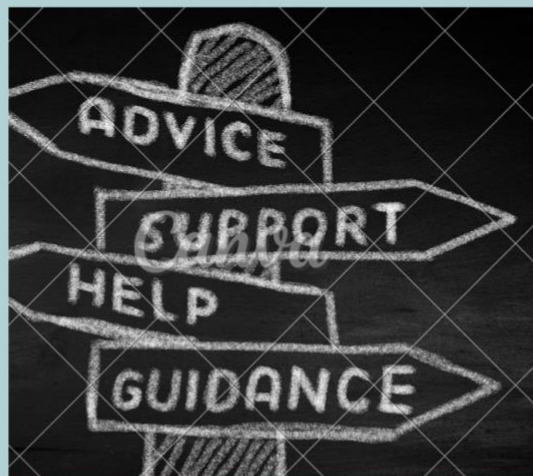

Malware and Viruses

Malware and viruses damage computers and steal personal data. You can protect your system by avoiding unknown downloads, suspicious links, and unsafe websites.

What to do if you have been scammed:

- Change your passwords
- Enable two-factor authentication
- Notify your bank if you think your card could have been compromised
- Visit our website for more information

Avoiding Phishing Scams:

Recognising Phishing scams

Phishing scams are the most common kind of scam. Recognising them is the key to avoiding them. Phishing scams can come in many forms, such as unsolicited emails, texts or messages.

They commonly ask for personal information or require you to click a link. If you receive an email from a bank or other online service, use the official website instead of clicking on any email links.

If in doubt, delete the message/email/text and contact the organisation directly.

If you think you have been the victim of a phishing scam:

- Change the password for the associated account
- If it was a banking scam, call the bank immediately
- Report the scam to SCAMWATCH (www.scamwatch.com.au)
